

This newest member of our Government Suite is taking its place next to our popular products, **The American Prosecutor™** and **The American Defender™**. This modular product is streamlined specifically for the legal needs of U.S. Government regulatory agencies that handle civil and/or criminal matters. Whether you conduct the entire case yourself, or if you advise on cases for other entities, **The American Civil Attorney™** will give you effective Case Management right away.

Mix-and-Match Modules are provided to give you the power you need to handle your kind of matters today, including:

- Civil Matters** Defense and Plaintiff matters are easily handled. You set up your own case types to organize, review and highlight the work you are doing today.
- Legislative Review** Legal departments often review proposed and pending legislation and offer legal opinions. This module tracks the work, the time commitments and the results.
- Opinions** Whether it is an employee with a quick question, or a full written analysis, all the opinion and assistance requests made to the legal department are recorded.
- Personnel** Special handling is offered for these sensitive issues.
- Workers' Compensation** Quick and effective handling of these claims pay off. You can see the overall claim picture and focus in on problems early in the process.
- Training** Legal departments are often called upon to offer training on legal and ethical issues. Whether you are offering a standard course or a custom class, or even a public speech, this module helps you track all that activity from scheduling to preparation.
- Hotline** If the department takes calls or e-mails directly from the public, this module will handle those calls and help you respond quickly and effectively while recording all call activity.
- FOIA Requests** The legal department may have to pass judgment on the validity of Freedom of Information Act and Privacy Act requests and determine the degree to which an organization should reply. This module tracks requests, work done on requests and results. Extensive reporting shows the flow of this important aspect of legal advisory services.
- Criminal Referrals** From simple perjury to major fraud, LegalEdge is well established in management of criminal cases of all kinds.
- Forfeiture** In Rem, In Personam or stipulated forfeitures are easily tracked, forfeited properties are clearly identified and tracked.

If you have special requirements, you will be surprised at how fast and accurately we can turn your ideas into reality.

Built on a Solid Base
